

ASSIGNMENT – 4

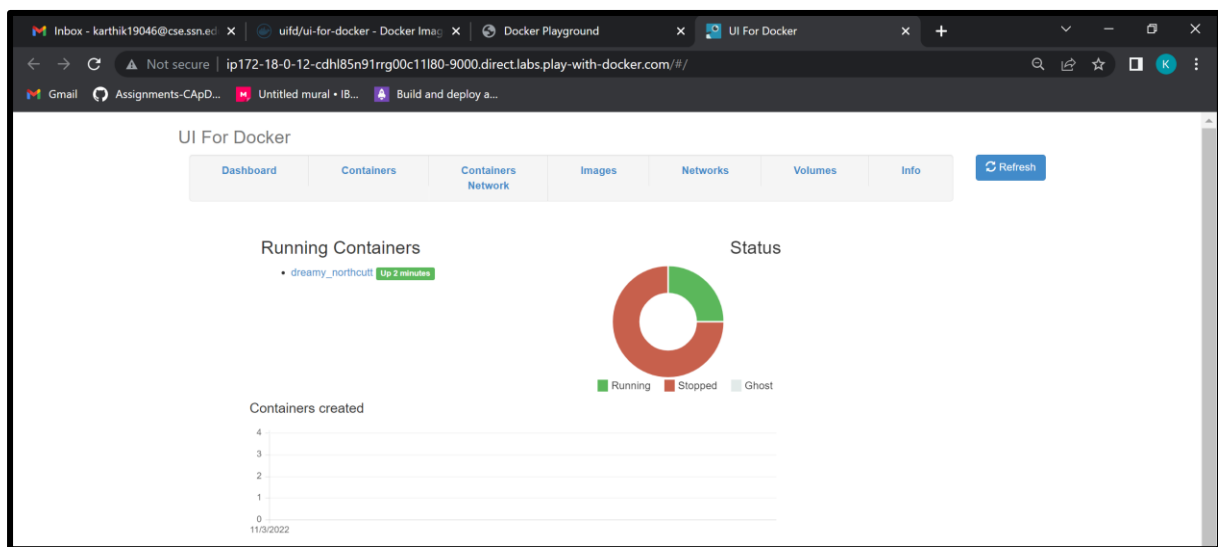

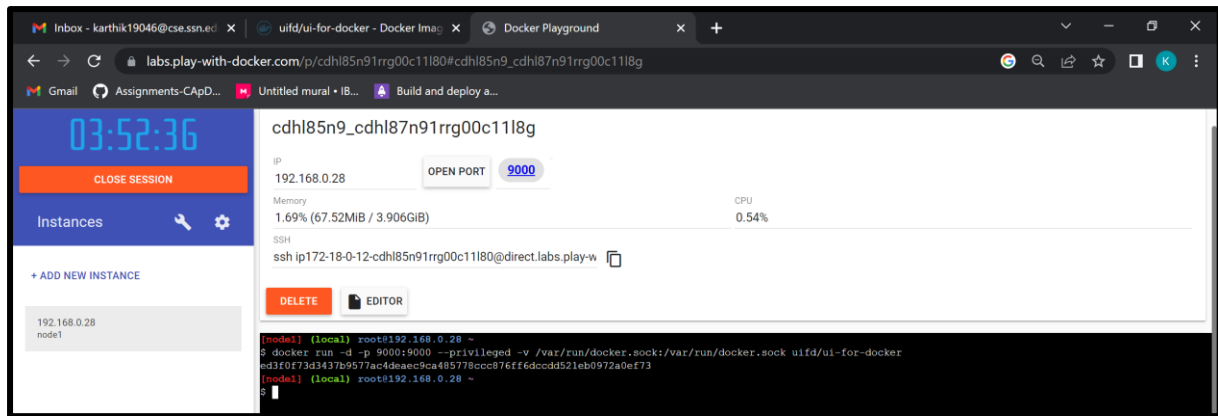

Name	KARTHIK A
Roll No	SSNCE195001046
Batch	B1A3E-07

AIM:

1. Pull an Image from docker hub and run it in Docker Playground
2. Create a docker file for the jobportal application and deploy it in Docker desktop application
3. Create a IBM container registry and deploy helloworld app or jobportal app
4. Create a Kubernetes cluster in IBM cloud and deploy helloworld image or jobportal image and also expose the same app to run in nodeport

1. Pull an Image from docker hub and run it in Docker Playground

2. Create a docker file for the jobportal application and deploy it in Docker desktop application

    ibmcloud ks - Manage Kubernetes and OpenShift clusters in IBM Cloud. Aliases include 'ibmcloud oc'.
USAGE:
    ibmcloud ks command [arguments...] [command options]
```

The screenshot shows the IBM Cloud Kubernetes Dashboard. The top navigation bar includes the 'Overview' tab. The left sidebar lists various Kubernetes resources: Daemon Sets, Deployments, Jobs, Pods, Replica Sets, Replication Controllers, Stateful Sets, Service, Ingresses, Ingress Classes, Services, Config and Storage, Config Maps, Persistent Volume Claims, Secrets, Storage Classes, Cluster, and Cluster Role Bindings. The main content area displays the 'Workloads' section, which includes a 'Workload Status' visualization showing three green circles representing Deployments, Pods, and Replica Sets, each with a 'Running: 1' label. Below this, the 'Deployments' table is visible, showing a single deployment named 'job-portal' with a '1 / 1' pod count and a '12 seconds ago' creation time. The bottom of the dashboard shows a Windows taskbar with the search bar and several application icons.

```

You can now execute 'kubectl' commands against your cluster. For example, run 'kubectl get nodes'.
If you are accessing the cluster for the first time, 'kubectl' commands might fail for a few seconds while RBAC s
ynchronizes.
